

Hot Heads; Advanced Cooling System Service and Diagnosis

Tuesday May 7th

Lincoln Technical College 11194 E. 45th Ave, Denver, CO 80239

Class begins promptly at 6pm - Dinner served at 5:30 - 6pm

This class sells out fast. If there are enough registrations we will add a second night May 8th

The cooling system has evolved rapidly in the last few years. Many of the techniques that have served us well are no longer relevant to modern cooling systems. We all know that finding the root cause of component failures is critical to making money and avoiding repeat failures.

Donny Seyfer, Gates Rubber Company and others have spent the last two years developing a workshop demonstrating the latest research and techniques. You won't look at cooling systems the same again.

Using case studies we will learn how to diagnose the toughest cooling system problems like overheating, flow related issues, repeat water pump and heater core failures, and coolant chemistry related issues.

This class was a sell out at VISION and ATE Trade shows. The most common thing we got on our reviews was I wish my owner/advisor had been here for this.

Highly recommended for techs, service advisors and owners. We are offering a special price for multiple attendees. \$99 for the first attendee with a cap of \$250 per shop (up to 5 attendees). Chances are you are leaving thousands of dollars in service work in the bays with virtually no additional equipment needs.

Shop Name: _____

Number of Attendees: _____

Phone: _____

Preferred Method of payment: Napa account Check
